TRENCH HEATING

Price list with effect from 1st April 2011

The Trench is a practical heating solution, requiring no wall space and giving an excellent heat output. An exceptional design, the Trench is built into the floor and covered by a stylish grille. Trench units are ideally positioned in front of an expanse of glass (e.g. patio windows, sliding folding doors, conservatories). The heating works by creating a 'chimney effect', which draws cold air to the bottom of the trench. This is then passed over the heating element and rises as a curtain of warm air, not only warming, but helping to eliminate condensation as well.

Trench heating should be incorporated at the design stage, and comprises a waterproof trench sunk into the ground, containing a natural convector heating element, feet, baffles and a rigid top frame designed to take a choice of grilles. The grilles are designed to be walked on and are the only part of the heating unit visible at floor level.

300mm deep

length (mm)	width (mm)	watts	btu	price (£)

- Also available in 520mm & 620mm deep, please call for a quote.
- Choice of grilles is either painted aluminium (white, black, bronze, silver) or various woods (ash, beech, oak or merbau - untreated or varnished). Please specify choice of grille at time of order
- Aluminium and copper convector, fibreglass trench unit, wood or aluminium grille.
- All trenches are made to order, please allow 4-5 weeks
- Sections can be joined together in sequence - in which case the final grille measurements will need to be taken once the trench heating is in situ. Grilles will follow in around 10 days
- Please call for more information
- Nationwide delivery available - usually £25 per consignment
- Heat outputs are shown at operating temperatures of 90/70/20 (Δt60°C)
- All sales are subject to our standard terms and conditions a copy of which can be downloaded from our website

The above prices are exclusive of VAT.
